- Web Development: HTML, CSS, JavaScript, Django
- Programming: Python, Java, JavaScript
- Database: SQL, SQLite
- Time Management
- Leadership
- Effective Communication
- Critical Thinking

LANGUAGES

- Nepali : Fluent
- English: Intermediate
- Hindi: Basics

PROJECTS

Land Renting Management System (Python)

- Develop a land rental management system automates many time-consuming tasks, making it easy for users to find a land. The system allows users select land by kitta number, instantly checking availability and calculate rental costs, including taxes. IT then generates a detailed bill and automatically updates the land's availability status.

Printer Selling Website (HTML, CSS, JavaScript)

- Designed and developed a responsive e-commerce platform for selling printers.
- Integrated product catalog, search functionality, and an intuitive UI for users.

Teacher Management System (Java)

- Built a system for managing teacher in university.
- Implemented object-oriented principles to ensure scalability and maintainability.

TO-DO List (Django)

- Built a system to make a daily goal list. User can add, update, delete task.
- It include both front-end (HTML, CSS, JS) and back-end (Django).
