Bigyat Thapa

College Student

Enthusiastic web developer, excited to build newer solutions. Full stack projects like e-commerce sites, music players, personal portfolios have been built successfully using Tailwind CSS for an appealing front end and Django for an effective back end. I become inspired creatively when being able to take an idea and convert it into a user-friendly application. My skills? Full-stack development, problem solving, and user-centered design

Personal Information

- Date of Birth: 12/03/2004
- Nationality: Nepalese

Projects

Personal Portfolio Website
Technologies Used: Tailwind CSS, JavaScript, Django
- Created a responsive personal portfolio to showcase skills, projects, and achievements.
- Integrated a mail system allowing users to send messages, which are received directly by me.
- Live Demo: https://thapaabigyat.pythonanywhere.com/

E-Commerce Website
Technologies Used: Django, Tailwind CSS, JavaScript, eSewa API, 3D Design
- Developed a full-stack e-commerce website with product catalog, shopping cart, and payment processing.
- Integrated eSewa payment gateway for secure transactions and used a 3D design for product views to enhance user experience.

Music Player Website
Technologies Used: Django, Tailwind CSS, JavaScript
- Built a music player platform allowing users to

play, pause, and browse through music tracks.

- Focused on a clean and modern user interface, offering seamless navigation and interactive features.

Social Networking Platform

Technologies Used: Django, Tailwind CSS, JavaScript

- Developed a membership-based social platform where users can create profiles, post photos, like, and comment on each other's content.
- Implemented exclusive content access for members and dynamic UI features such as dark/light theme toggle.

Food Recipe Nepal API

Full-Stack Developer | *Django REST Framework, Python, SQLite, React, TailwindCSS*

Live Demo:

https://foodrecipenepal.onrender.com

API Documentation:

https://foodrecipenepal.onrender.com /documentation

Project Overview

Developed a recipe recommendation API that allows users to search for recipes based on available ingredients, helping reduce food waste and simplify meal planning.

Key Features

- Implemented an ingredient-based search to return relevant recipes
- Designed a Django REST API with structured endpoints for seamless integration
- Developed a React frontend to provide a user-friendly experience
- Optimized database queries using SQLite for efficient data retrieval
- Created a responsive UI using TailwindCSS

Impact & Achievements

- Launched a free-to-use API for developers and food enthusiasts
- Deployed a scalable solution on Render for accessibility and performance
- Gained hands-on experience with real-world API integration for Django and React
